TECH VEST

The Tech Vest is constructed from heavy duty PVC woven mesh and abrasive resistant Cordura nylon and is fully adjustable to provide a comfortable fit for the modern underground worker.

The materials used in the Tech Vest provide for a comfortable load carrying harness which "breathes" through the use of the PVC woven mesh. Moisture absorption of the padding is reduced by utilizing quality, moisture resistant, high density foam.

Underground visibility is increased through the incorporation of 3M Scotchlite reflective panels on the Tech Vest.

Adjustments are made by using the main straps at the rear of the vest, the two main waist straps at the front of the vest and adjusting the shoulder pads. The vest has specially designed pouches for placement of small tools.

Not everybody is the same size or shape therefore, the Tech Vest load carrying system is readily available in the following sizes;

MEDIUM - To suit waist 82-86cm (32-34")

LARGE - To suit waist 86-96 cm (34-38")

EXTRA LARGE - To suit waist 96-106cm (38-42")

Custom sized Tech Vests outside of the above sizes are also available.
